Come up with your own ideas

projects given below is just for your reference purpose

We don't want you to repeat the same old projects which are available in the market, get some new and unique Ideas, Our faculties are there to help you with all possibilities.

- smart home using microcontroller
- bluetooth controlled robot using robot
- smart vehicular comunication system using microcontroller
- automatic railway gate contol system line following robot
- coin based water dispenser system
- pinger print vehicle starter system
- fire and gass accident prevention system
- dam water level analysis
- automatic water management and efficent distribution
- automatic break control system
- anti theft vehicular security system with finger print verification
- traffic signals with synch system
- vehicular theft detection system using gsm and gps
- ultrasonic object dection system
- wifi for vehicular communication system
- street light control system
- fire and gas accident avoider
- iot irrigation monitering and control system
- coin based water dispenser system
- advanced foot step power generation system
- solar power monitering system
- fire department alerting system (mini)
- energy meter monitering over iot
- smart bus tracking system
- wireless sensor networs using microcontroller
- liquid flow monitering and controlling
- smart drip irrigation system using microcontroller
- smart door bell
- biometric system based class attendance
- smart car using microcontroller
- flood monitoring and alert system

- remote monitoring of industries
- wifi operated robot
- iot based weather system
- human following trolley using microcontroller
- gas pipe leakage dictation
- voice controlled home automation
- patrolling robot with sound sensing
- drink and drive detection with ignition loc system
- speaking bus stop reminder
- wheel chair with safety system
- gesture control robot
- smart helmet
- smart toll plaza
- smart no parking system
- piezoelectric based voltage generator
- surveillance robot with night vision camera
- iot based underground cable fault detection system
- smart curtain opening system
- biometric attendance system for classroom
- smart blind stick
- RF tag based security system
- reducing speed of the vehicle using iot
- smart bus stop alert system using gps
